

Aluminum Outswing Sectional Zero Step Sill

The Zero Step Sill is our proprietary design innovation that offers a seamless transition from interior to exterior floor levels. The continuous draft guard seal eliminates the need for ineffective and unsightly door mounted sweeps and effectively closes the gap usually found in these applications. When the doors are closed, the draft guard is rotated into the raised position and protects against the outside drafts and weather. When the doors are opened the draft guard seal drops down flush with the finished floor and creates the ultimate indoor/outdoor experience. We recommend the zero step sill for weather protected openings only. Please note the net frame height will be measured from the bottom of the recessed sill and recessed area must accommodate 4" wide jamb legs.
